

NDLAMBE MUNICIPALITY

Water Services Notice

PORT ALFRED-ALL AREAS

The Ndlambe Municipality would like to inform the residents of Port Alfred that the quality of raw water currently entering the Port Alfred Water Treatment Works is highly turbid due to recent rains that have resulted in increased sediment and runoff into the Kowie River. This high turbidity has significantly impacted the plant's ability to fully treat the water to its usual standard.

As a result, residents may experience brownish or discoloured tap water. While the water continues to undergo disinfection and every effort is being made to maintain water safety, the current conditions may affect the overall quality of the treated water.

We therefore advise all residents to boil water intended for drinking, cooking, or brushing teeth as a precautionary measure.

The municipality is actively monitoring the situation and working to improve treatment effectiveness. We apologise for the inconvenience and request your understanding and cooperation during this time.

PLEASE USE WATER SPARINGLY

NOTICE NUMBER:146/2025
